The Unified System Release 2001/11/199! CHARDIP 79-0079840002000200020-2

Computers (EC 3BM) is a family of the third generation computers for solving a wide range of scientific, business as well as administrative problems. The modular design and the construction of EC 3BM as well as the elaborated Standard Interface System of the central part and peripheral devices allow the user to select the configuration of the concrete system accurately matched for immediate problems and the system development in future. The existing system allows to add new peripheral devices or to substitute a more powerful processor.

The electronic part of all devices is based upon the broad application of monolithic integrated circuits. This technique provides high-speed operation of computers, high reliability and comparatively

are 7 computers within the EC 3BM: EC 1010/1020/1020A/1030/1040 1050/1060. They are designed on the base of 7 processors with the speed in the range from some thousand up to 1.5 million operations per second. The concepts of design make possible to develop the system by adding new models at any point in the range. The EC computer system has been designed by a large group of specialists of research institutes and factories of countries of the socialist concord - People's Republic of Bulgaria, Hungarian People's Republic, the German Democratic Republic, Polish People's Republic, the Union of Soviet Socialist Republics and the Czechoslovak Socialist Republic. The Industry output of EC Computers began in 1972.
